Question No. 1

The Job_Application__c custom object has a field that is a Master-Detail relationship to the Contact object, where the Contact object is the Master. As part of a feature implementation, a developer needs to retrieve a list containing all Contact records where the related Account Industry is 'Technology' while also retrieving the contact's Job_Application__c records.

Based on the object's relationships, what is the most efficient statement to retrieve the list of contacts?

- **A.** [SELECT Id, (SELECT Id FROM Job_Applications_r) FROM Contact WHERE Account.Industry = 'Technology'];
- **B.** [SELECT Id, (SELECT Id FROM Job_Applications_r) FROM Contact WHERE Accounts.Industry = 'Technology'];
- **C.** [SELECT Id, (SELECT Id FROM Job_Applications_c) FROM Contact WHERE Accounts.Industry = 'Technology'];
- **D.** [SELECT Id, (SELECT Id FROM Job_Application_c) FROM Contact WHERE Account.Industry = 'Technology'];

Answer: B

Question No. 2

Universal Containers (UC) uses a custom object called Vendor. The Vendor custom object has a master-detail relationship with the standard Account object.

Based on some internal discussions, the UC administrator tried to change the master-detail relationship to a lookup relationship, but was not able to do so.

What is a possible reason that this change was not permitted?

- **A.** The Account object does not allow changing a field type for a custom field.
- **B.** The organization wide default for the Vendor object is Public Read/Write.
- **C.** The Account object has a roll-up summary field on the Vendor object.
- **D.** Some of the Vendor records have null for the Account field.

Answer: C

Question No. 3

Consider the following code snippet:

```
public static List<Lead> obtainAllFields(Set<Id> leadIds) {
    List<Lead> result = new List<Lead>();
    for(Id leadId : leadIds) {
        result.add([SELECT FIELDS(ALL) FROM Lead WHERE Id = :leadId]);
    }
    return result;
}
```

Given the multi-tenant architecture of the Salesforce platform, what is a best practice a developer

should Implement and ensure successful execution of the method?

- **A.** Avoid executing queries without a limit clause.
- **B.** Avoid returning an empty List of records.
- **C.** Avoid using variables as query filters.
- **D.** Avoid performing queries inside for loops.

Answer: D

Question No. 4

While writing an Apex class, a developer wants to make sure that all functionality being developed is handled as specified by the requirements.

Which approach should the developer use to be sure that the Apex class is working according to specifications?

- **A.** Include a try/catch block to the Apex class.
- **B.** Run the code in an Execute Anonymous block in the Developer Console.
- **C.** Create a test class to execute the business logic and run the test in the Developer Console.
- **D.** Include a savepoint and Database.rollback ().

Answer: A

Question No. 5

A developer Is Integrating with a legacy on-premise SQL database.

What should the developer use to ensure the data being Integrated is matched to the right records in Salesforce?

- **A.** Lookup field
- **B.** External ID field
- **C.** Formula field
- **D.** External Object

Answer: B
